

About Me

Game developer with 5+ years of experience, from gameplay programming to LiveOps and free-to-play monetization. I'm a big fan of AI integrated workflows and tooling, and I build with Claude Code every day. I've shipped titles in-studio, for clients and solo.

Skills

- AI-Assisted Development (Claude Code)
- Agent Workflows: rules files, context docs, automated checks
- Automation & Editor Tooling
- Unity Engine
- C#
- Gameplay Programming
- Mobile & PC (Android, iOS, Steam)
- Free-to-Play Monetization
- LiveOps (Remote Config, Addressables)
- Unity Gaming Services
- Performance & Memory Optimization
- UI/UX
- Animation/VFX
- Version Control (Plastic SCM, Git)

Language

- English (C1)
- Romanian (native)

Sergiu Laurentiu Pert

Unity Game Developer

Summary

I'm a Unity developer with shipped mobile free-to-play titles at SuperPlay (Domino Dreams) and PocketFun, and I run Evilos solo: live on Google Play, with the Steam release on 14 Dec 2026. I build with Claude Code under a curated rules setup and review every change. I'm strongest in gameplay, LiveOps systems, IAP and ads, and performance.

Work Experience

EVILOS — Play Store · Steam

Independent Game Developer

(2023 – Present, live on Android, Steam release on 14 Dec 2026)

My 2D tower defense built in Unity, where the player is the evil overlord defending against waves of heroes across 10 acts: 100 levels, 24 evolvable weapons and spells, 12 languages.

- Designed and built the entire game, about 30,000 lines of C#: gameplay, enemy AI, UI/UX, economy and LiveOps.
- AI-assisted workflow: Claude Code guided by a curated rules file and 10 context docs, plus AI-built tooling such as an on-device test suite and store-API scripts for pricing and listings.
- Live-tunable balance on UGS Remote Config with a three-tier fallback, so weapons, enemies and difficulty change without a client update.
- Full free-to-play stack: 16 IAP products, LevelPlay rewarded and interstitial ads, a Tapjoy offerwall and UMP consent, with prices set for 173 Google Play regions.
- Cut the game's Android size from 514 MB to 151 MB by streaming media from a Cloudflare CDN via Addressables, subsetting CJK fonts and capping textures.

GAME MARKETING HUB

My own tool (2026)

- Local-first creator-outreach platform in Node, TypeScript, SQLite and React, specified with Claude Code and checked against real data, with about 610 automated tests.
- Finds YouTube creators who cover similar games, scores them for fit (18,000+ so far), extracts their published contact addresses and prepares localized emails with opt-outs and daily send caps.

SuperPlay
Mid Unity Developer - MTX department (July 2025 – June 2026)

Domino Dreams - A story-driven domino puzzle adventure where players solve domino-matching levels to progress through a narrative and rebuild a world. Released on Android and iOS. Play Store · App Store

- Built the pet selection system, a monetized feature that drives player engagement, and integrated it into the start-of-level menu
- Expanded it with collectible pet skins, adding a new monetization and engagement driver
- Implemented the visuals for a new X5 multiplier game mode
- Designed a simpler, reusable badge system that can be used in any MTX game event
- Consolidated multiple separate event task-tracking systems (Dream Pass, Swamp Escape) into a single reusable one, reducing development time for future task-based events

PocketFun
Unity Game Developer (April 2023 – June 2025)

Pichoo's World - client project, finished and released on Android and iOS · App Store

- Implemented 40% of the minigames and UI for the game
- Implemented Unity's Addressables system to dynamically load only the necessary game files, reducing the game's memory load by 70%

Dots Connect Zen Garden - our own project, released on Android and iOS

- Implemented all of the game's lighting, VFX and post-processing. When they caused considerable frame drops on a 4-year-old phone, built a system that detects the frame rate on the device and automatically optimizes or culls effects until the game reaches 60 fps
- Created the koi fish pond's particle systems, together with the logic for unlocking the props inside it
- Implemented mobile ads through Unity LevelPlay

Recycle Champions - client project, MVP released on Android and iOS

- Implemented a timed-rewards and idle resource generation system, writing the server-side functions that calculated generation authoritatively for tamper-resistant results
- Built a map feature with periodically appearing collectible resource bubbles, implementing the server-side validation for the rewards

CODECOOL
Full-Stack Developer Training Program, C# Track (Sep 2021 – Sep 2022)

- Team projects in ASP.NET Core, EF Core and SQL Server, and a four-day team game in Unity

Bemix Art SRL
Manager (Sep 2021 – March 2022)

- Trained the team members, ensuring they can perform their duties
- Supervision and task delegation
- Improved efficiency by creating streamlined workflows and tracking systems

Deloitte
Analyst, Global Investment and Innovation Incentives (Gi3) (Nov 2019 – Aug 2021)

- Categorized spending across client projects to secure the most favorable tax deductions

Education

(2017 – 2019)
FACULTY OF ECONOMICS AND BUSINESS ADMINISTRATION - TIMISOARA
Master's Degree - International Corporate Finance

(2014 – 2017)
FACULTY OF ECONOMICS AND BUSINESS ADMINISTRATION - TIMISOARA
Bachelor's Degree - Finance and Banking
